LEARNING PROCESS - COGNITIVE APPROACH

LEARNING PROCESS - COGNITIVE APPROACH

!FAILURE

**Misconception \neq Lack of
conception**

**Misconception = Alternative
conception**

Observing everyday events

COHERENCE THEORY

Learner develops naive ideas
in a **internally coherent** way

New idea will be judged against already
existed **internally coherent concept**
(misconception)

New idea may be rejected
because it **does not fit learner**

misconception

**LEARNING \neq CREATE COMPLETELY
NEW CONCEPTION**

**LEARNING = PROMOTE
CONCEPTUAL
CHANGE**

? WHAT TEACHER SHOULD DO

- ✓ PROVOKE **DISSATISFACTION** WITH EXISTING CONCEPT
- ✓ INDUCE **CONFLICT OF CONCEPTS**

HOW IT CAN BE

- ✓ **?** ~~CREATE~~ **SMALL-STEP EVOLUTION** OF CONCEPTS
- ✓ LET STUDENTS FACE **CONTRADICTIONS** OF NEW DATA WITH EXISTING MISCONCEPTION - STUDENTS-LED ACTIVITIES

MISCONCEPTION IN

KINEMATICS

Many students see physics as just a collection of mere formulas and do not understand the meaning. This is a reason why they think physics is difficult.

Students only memorize the formula and only skillfully perform the calculations without understanding the meaning or concept that is being learned.

Students have difficulties to translate from an actual motion to its representation on a graph and from the graph to an actual motion.
